

# STEM Lab LIVE for Kids

*Innovative Hands-On and Project Based Learning  
Streamed LIVE to Your Location*

## *Ready to Offer Your Students an Innovative STEM Curriculum?*

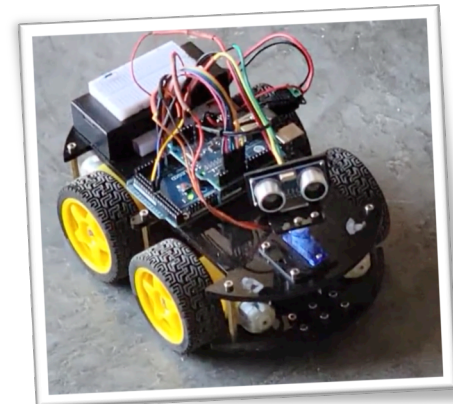

Your students deserve the best possible STEM education available. Our Live streaming STEM classes are tailored for private schools, church schools and home schools. If your school does not have the budget to provide a STEM teacher, we have the solution for you. We present innovative STEM curriculum from a LIVE teacher and stream it all to your location. We want all kids to have access to STEM.

Our qualified STEM teacher will work with your onsite representative to provide software and hardware setup, deliver class project materials, and lead Question & Answer sessions. We offer classes in coding, robotics, computers, and video/animation for as low as \$60/month per student. Scholarships & Grants may be available.
